

FIXED ASSET AND MATERIALS POLICY

Based on our principle of production in modern, well-maintained, good-looking and ergonomic buildings;

- All sites, whether production or non-production, at Aromsa facilities are provided safe and suitable work environments which give employees positive feelings.
- All buildings receive periodical maintenance. These maintenance activities are carried out to minimize potential malfunctions and include maintenance and repair to ensure a longer life cycle such as repair of equipment and facilities, cleaning of rain gutters and replacement of equipment and parts that have completed their economic lives.
- Periodical maintenance and repair agreements with suitable conditions are made with manufacturers or technical service companies for technical equipment that requires specialized repair and maintenance services (for example refrigeration equipment, UPS, generators, elevator, etc.).
- Equipment and fixtures in all buildings are modern, aesthetic, and ergonomic and the work environment is designed and built to drive motivation and pleasure for the employees.
- All materials used in the facilities meet relevant expectations.
- Equipments, materials and fixtures are used with maximum care and efficiency throughout their life cycles.
- Materials are stored, kept and consumed/used with maximum efficiency throughout their life cycles.
- *Selection, use and disposal of all fixed assets based on circular economy principles within the framework of sustainability.*
