

GLASS, HARD PLASTIC POLICY

Our main principle is to reduce the use of glass, hard plastic in our production and warehouses and ceramic materials are never used.

Our main principles in this matter are;

- Glass materials have a protective film.
- Glass, hard plastics are classified according to their risk level;
 - High risk; materials that are directly in or very close to the production area
 - Moderate risk; materials that are in the production area
 - Low risk; materials that are at a sufficient distance from the production area
- All relevant materials are listed and recorded according to their risk level
- All relevant materials are checked daily, every 3 months and every 6 months depending on their risk level.
- There are devices and tools that are only used for cleaning in the event that glass or hard plastic materials are broken.
- Accidents involving breaking of glass and hard plastics are recorded and food safety team leader is informed to ensure effective cleaning of the area.
